The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atherosclerosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used PCR primers and probes. The polynucleotide sequences can also be used useful in gene therapy. AAS94746-AAS95021 represent the human polynucleotide sequences of the invention which are differentially expressed during foam cell differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that are differentially expressed in foam cell development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2889 BP; 600 A; 873 C; 929 G; 487 T; 0 U; 0 Other;

The present sequence encodes the human kinase and phosphatase protein (KPP), designated KPP-43. The human KPP sequences from the present CC invention have cytostatic, antiarreriosclerotic, anticonvulsant, concurrence cytostatic, antiarreriosclerotic, anticonvulsant, control concurrence cytostatic, antiarreriosclerotic, anticonvulsant, control contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cerebroprotective; anti-HIV; antiallergic; antiinflammatory; thyromimetic; gene therapy; cell proliferative disorder; cancer; atherosclerosis; neurological disorder; epilepsy; Huntington's disease; stroke; immune disorder; inflammatory disorder; AIDS; allergy; developmental disorder; Hypothyroidism; Cushing's syndrome; infection; KPP-43; single nucleotide polymorphism; SNP; gene; ss.

                                                                                                                       The invention relates to a method for inducing neutralisation of cells or tissues by using a protein binding to CRAM (collapsing-response mediator protein-associated molecule) protein or its encoded gene. The proteins and their encoded genes are useful in gene therapy and regenerative medicine, e.g. by inducing neutralisation of mitochondria. They are also applicable in diagnosis, drug development for neural diseases and studying the mechanism of pathosis. The current sequence represents CRAM protein related cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Neuroprotective; neutralisation; CRAM; collapsing-response mediator protein-associated molecule; mitochondria; drug development; neural disease; pathosis;

                                                                                                                                                                                                                                                                                                                                                                                  27-AUG-2003
25-MAR-2003
27-JAN-1991
The fur gene, encoding furin, is in the human and cat genomes directly upstream of this fee/fps proto-oncogene sequence. Furin is strongly expressed in specific types of tumours and labelled RNA or DNA probes of the fur gene and antibodies against furin can be used for diagnostic purposes. (See also ANN70061-62 and AAP70056). (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid archiritis. The current sequence represents a human gene of the invention encoding a protein that promu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ঠ
This invention is related to a novel isolated canine nucleic acid sequences and the construction of canine microarrays containing a significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of compound, pharmaceutical agent or environmental pollutant on a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   environmental pollutant; cellular response; gene expression profile; toxic response; liver necrosis; fatty liver disease; protein adduct formation; hepatitis; dog; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  canine microarray; drug screening; toxicity assay;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC to detect a cellular response in a sample individually or as part of a condulate gene expression profile. It is also useful as a target for agents that CC modulate gene expression or activity. The database is useful for CC producing electronic Northerns that allow the user to determine the cell CC type or tissue in which a given gene is expressed and to allow CC determination of the abundance or expression level of a given gene in a CC garticular tissue or cell. The methods are useful for determining the CC similarity of a toxic response to one or more individual compounds. The CC methods are useful for predicting at least one toxic response or the CC methods are useful for predicting at least one toxic response or the CC pathologies such as those of the liver (liver necrosis, fatty liver CC disease, protein adduct formation or hepatitis), those of the kidney, CC heart, brain or testes, or other pathologies associated with at least one CC the potential cellular pathways influenced, induced or modulated by the CC compound or test agent due to the similarity of the expression profile CC compared to the profile induced by a known toxin. The present sequence is CC that of a canine DNA sequence which was claimed for use during the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Also disclosed is an isolated polynucleotide encoding (I), a recombinant vector comprising the polynucleotide and a gene therapeutic agent comprising the recombinant vector as an active ingredient. The proteins, genes, agents and methods are useful for preventing and treating a cartilage disease, e.g. osteoarthritis, cartilage defect, or rheumatoid arthritis. The current sequence represents a human gene of the invention encoding a protein that promotes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2148
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1917
```

The invention relates to an isolated polynucleotide comprising any or 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence determined by the technique of SBH (sequencing by hybridisation). Also

comprising

рJ

Also one

얁

38043 cDNA sequences, appearing as determined by the technique of SBH included is a purified polypeptide

The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligoners for PCR, for alternating and other traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; 88; protein kinase; mine16676human_81; cytostatic; antianginal; hypotensive; cardiant; cardiovascular disorder; heart failure; hypertension; atrial fibrillation; dilated cardiomyopathy; hypertension; atrial fibrillation; dilated cardiomyopathy; angina; proliferative disorder; cancer;

The invention relates to identifying a compound which binds to a Kinase (encoded by a nucleotide sequence of 1868, 403, 545, 361, 473, 3001, 526, 663 or 1448 base pair (bp) as given in the specification) comprising contexting the kinase with a test compound under suitable conditions for binding, and detecting binding of the compound to the Kinase. The method cis useful for identifying a compound which binds to the kinase and also for isolating compounds which modify the activity of the kinase. The characterised by aberrant kinase activity where the disorder includes cidentified compounds which modify the activity of the kinase. The condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition characterised by a deregulation, e.g. an upregulation or a condition of cellular growth, Cellular growth deregulation of cellular growth, Cellular growth deregulation of cellular growth, cellular growth deregulation, cellular condifferation, at a serial fibrillation, dilated conditions as cancer (including melanoma, prostate cancer, cervical, breast, colon sarcoma). The kinases and antibodies raised against them care useful in one or more method such as screening assays, predictive medicine and methods of treatment. The nucleic acid molecules are useful cor expressing kinase and phosphatase mRNA or a genetic collaboration, the collaboration of the present sequence is a cDNA for a human protein consequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying compound which binds to a Kinase, useful for treating diseases e.g. cancer, by contacting kinase with test compound and detecting its binding to the kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Fig 5; 45pp; English

The kinases and phosphatases and their encoding nucleic acids are potentially useful drug targets. The present invention may also be useful in diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-AUG-1999; 99US-00387212

Novel human kinase and phosphatase nucleic acid molecules useful treating cellular proliferative disorders such as cancer, cardiov diseases, hypertension, heart failure and angina. cardiovascular

Claim 7; Fig 5; 47pp; English.

The invention relates to an isolated human kinase and phosphatase nucleic CC acid molecule appearing as ABX14972, ABX14973, ABX14975, ABX14976, and CC ABX14978-ABX14981, or their complement. Also included are: (1) an CC isolated nucleic acid molecule which is at least 90 % identical to the CC nucleotide sequence ABX14973 or ABX14975, or 95 % identical to the CC nucleotide sequence ABX14973 or ABX14975, or 95 % identical to the CC complement, where the nucleic acid molecule encodes a polypeptide having CC a kinase activity; (2) An isolated nucleic acid molecule which hybridises CC to ABX14973, ABX14976, and ABX14978 in 6X saline sodium citrate (SSC) at 45 plusoC, followed by one or more washes in 0.2X SSC, 0.1% cC sodium dodecyl sulphate (SDS) at 65 plusoC, where the molecule encodes a CC polypeptide with kinase activity; (3) a vector comprising the CC compressing a polypeptide by culturing a host cell comprising the CC compressing a polypeptide by culturing a host cell comprising the CC confisation probes for detecting which the nucleic acid molecule is expressed. CC feelular processes, and fragments are useful as primers or CC hybridisation probes for detecting kinase and phosphatase encoding cardiovascular disorders such as cancer and cellular growth related disorders including cardiovascular disorders such as heart failure, hypertension, atrial CC campina. The present sequence is one of the human kinase or phosphatase cDNAs of the invention

Sequence 361 BP; 71 A; 101 C; 120 G; 68 T; 0 U; 1 Other;

13.1%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                               2029.6

The sequence of 1182 amino acids was deduced from the Fujinami sarcoma virus (FSV) transforming protein p130, the product of gag-fps fused gene. p130 is highly homologous to the gag-fes sequence of feline sarcoma virus (see separate entries), and is homologous in the 280 residue carboxyl end (including the

```
cansforming polyprotein of the snyder-theilen strain of feline a virus (fesv) include the transforming gene (fes) product yrosine specific protein kinase activity, the encoded protein train (see fesvgaone), fps gene products of gardner-arnstein ttrain (see fesvgaone), fps gene of avian fujinami sarcoma (see fsv), and src gene of avian sarcoma virus, the reported ne contains a 145bp deletion against the ga strain, and the sargue that they sequenced a defective clone, the missing bides are denoted by n's (see fesvgaone between 1818 and 1964 resumed base sequence), the last 24 bases represent the ce of feline leukemia virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ses 1 to 2397)
A., Laprevotte, I., Galibert, F., Fedele, L.A. and Sherr, C.J. tide sequences of feline retroviral oncogenes (v-fes) provide ce for a family of tyrosine-specific protein kinase genes (2) (3), 775-785 (1982)

Comsortium/LLMI at: http://image.llnl.gov Series: IRAK Plate: 155 Row: j Column: 3
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact: XGC help desk
